Code **Python3**

```
1 class Solution:
2     def maximumWealth(self, accounts: List[List[int]]) -> int:
3         maxi = -1
4         for customers in accounts:
5             temp = 0
6             for amnt in customers:
7                 temp += amnt
8             maxi = max(temp, maxi)
9         return maxi
```
